

Enitan Akinfenwa

Frontend Software Developer

enitanolawale0@gmail.com

Nigeria

As a dedicated frontend software developer, my passion lies in crafting functional and user-centric websites and web apps. With a commitment to optimizing the user experience, I have honed my skills to create digital solutions that meet the needs of today's dynamic online landscape. With a keen eye for design, a strong proficiency in web technologies, and a drive for innovation, I am well-equipped to contribute to the development of intuitive, easy-to-use, and visually appealing digital platforms that resonate with users.

Projects

[News By Eniitan](#)

This News Web App is a user-friendly web application that allows users to enjoy news summaries from around the world across various categories in their feed, users can get a general grasp of happenings around the world without having to read much, and should they come across a headline that interests them, they can click on the headline to read the full article. This application also provides a seamless experience with both Dark Mode and Light Mode functionalities, allowing users to customize their experience. Additionally, the web app remembers the user's preferred mode, ensuring that their chosen theme is applied every time they return to the site.

Features

- **News Feed:** Users can stay up-to-date with news summaries from various sources and categories in one convenient feed, they can also view particular categories that interests them (eg technology, movies...).

- **Dark Mode and Light Mode:** The app offers both Dark Mode and Light Mode options for comfortable reading in different lighting conditions.
- **User Preference Memory:** The web app remembers the user's selected mode and automatically applies it upon their return.
- **News Search:** Users can search for news about topics and events that interests them.

[Weather By Eniitan](#)

Weather By Eniitan is a simple and user-friendly web application that provides current weather information and weather forecasts for your location or any city in the world. It also allows you to toggle between Celsius and Fahrenheit modes, remembering your preference for future visits.

Features

- **Location-Based Weather:** If you grant permission to access your location, the app will display the current weather and forecasts for that location.
- **Default Location:** If you choose not to grant location access, or you have a setting that prevents location access, the app will display the current weather and forecasts for the default location (Accra, Ghana).
- **Search for Any City:** You can search for any city in the world using the search bar and you will be provided with accurate weather information for that city. You can also search for certain specific popular places.
- **Forecasts:** The site displays forecasts for the rest of the day and also for the next day.
- **Detects Time:** The site detects the current time in your location or any city you search for, it uses it to calculate how many hours are left in the day and then shows the weather forecasts of the coming hours accordingly.
- **Temperature Units Toggle:** The site allows you to switch between Celsius and Fahrenheit modes, ensuring that you see temperatures in your preferred unit.
- **Remembers Your Preference:** Your selected temperature unit (Celsius or Fahrenheit) will be remembered and applied every time you revisit the site, providing a personalized experience.
